Application for Frontend Developer / DevOps Engineer Position

Dear Recruiting Team,

I am an experienced IT specialist with over 15 years of professional experience and solid further training in frontend and DevOps engineering. I am confident that my skills and background would make a valuable contribution to your team.

Throughout my career as a system, network, and software engineer in the IT department of a major bank, I was responsible for network infrastructure administration and security, supporting business-critical systems, and implementing automation and monitoring solutions. This experience has strengthened my analytical skills, attention to detail, and ability to collaborate effectively within a team.

To expand my expertise, I completed frontend developer training at Tel-Ran School (Berlin), gaining hands-on experience with JavaScript, React, MySQL, HTML/CSS, and Git. I further enhanced my skills through an online evening course in DevOps engineering at Hillel IT School, where I worked with AWS, Docker, Terraform, Ansible, CI/CD pipelines, and Jenkins in practical projects.

I am currently seeking a full-time position where I can combine my extensive IT experience with my modern frontend and DevOps skills and continue to grow professionally. I am a fast learner, reliable team player, and work in a structured and efficient manner.

I would be happy to consider any suitable vacancies within your organization and look forward to the opportunity to discuss how my qualifications align with your needs.

Thank you for your consideration.

Sincerely,

DMYTRO KHADZAVA

FRONTEND DEVELOPER /
DEVOPS ENGINEER /
SYSTEMS ENGINEER
